RockSTAR

On-the-go Tracking and Communication

Designed with portability and ease-of-use in mind, RockSTAR is a robust and reliable tracking device for remote workers. With satellite tracking and communication capabilities, RockSTAR ensures your team is agile and informed in an emergency.

Communicate With Your Team, Regardless of Location

RockSTAR allows you to stay connected to your team outside of cellular range with satellite-based text messaging and email capability. Wherever the mission takes you, RockSTAR ensures you never lose touch.

Emergency Risk Management

If an emergency notification is signalled via RockSTAR, TracPlus will receive this distress and notify your team via in-app notifications, text messages and/or a phone call — allowing you to quickly handle an emergency responsively and effectively. To assist your team further, TracPlus can share vital information and data with rescue agencies when required.

Enhanced Situational Awareness

TracPlus offers enhanced situational awareness. Knowing the exact location and the ETA of your team increases safety and allows you to coordinate missions more effectively.

"Our people are vital. We stress that if in doubt, call for help. Having TracPlus and these devices is a small cost compared to the cost of a life." **Willie Sinclair - Wenita Forest Products**

Specifications

Dimensions	144mm × 76mm × 36mm (5.7" × 3.0" × 1.4")
Weight	303gm (10.68oz)
Connectors	USB Mini
Inputs	Bluetooth
Buttons	Five button key-pad with additional distress button
Indicators	Status indicator LED
Sensors	GPS, Accelerometer, Thermometer, Power loss
Screen Type	High visibility monochromatic OLED
Antennas	Built In GPS and Iridium
Satellite Network	Iridium SBD via 9602 short burst transceiver
